

## Appendix B

### Clause 5 (1) (a)

Rt - Is the allowable notional revenue under the CPI-X price path at the assessment date occurring in the calendar year t, being equal to Rt-1 (1+CPIt) (1-X), where the initial value for the price path, at the reference date, is R2004.

#### R2004

Maximum notional revenue at the reference date which would not have cause the distribution business to breach the price path threshold under the initial notice at that date:

**Individual Line Charge Customers** - These customers generally have contract capacities in excess of 100kVA. These customers have individual profiles which are assessed each year and are used to calculate their individual line charge. There are six profile parameters which the line charges are derived from, these are: The Contract Capacity (kVA), Winter Peak Demand (kVA), Winter Peak Energy (MWh), Winter Day Energy (MWh), Summer Day Energy (MWh), and Total Energy (MWh). Please refer to the Line Pricing Methodology on the PowerNet website for further details. To obtain notional revenue for each of the periods, the individual profile for each customer as at 31 March 2003 was inserted in the pricing model for each of the review years, this allowed us to generate comparable line charges using consistent quantities.

#### Notional Revenue at the first Assessment Date (6 September 2003)

Customer Name	Capacity Code	Numbers	Fixed Charge per Day	Annual Fixed Charge	Annual Day	Variable Rate c/daykWh	Variable Revenue
